

Portable sweat

The portable sweat consists of

- floor of 3 layers
waterproof, blanket, canvas on top
- canvas wall with pole sleeves
with blanket edge sealer at ground level
- canvas cap
- taffeta shell with zippered door
- six 13ft poles, one 19ft pole, stakes

It loads up in one backpack (not included)

The salient features are

- canvas walls and floor
- floor edge sealer
- rustic character

Canvas has a good feel for lying on and leaning against. The crack where the floor meets the walls is sealed with a strip of thermal blanket. During a sweat, when someone is 'sucking rug' and needs a breath of relief, the flap can be lifted in one spot to let a leak of air in.

Sweat rocks are sold separately

- basalt large cobbles and boulders
5-8 inch diameter
- 25 rocks to a set
5 per door x 4 doors plus some extras

Portable sweat

Wt: 42 lbs

Cost: \$400

In stock: no

Estimated wait time: 4 weeks

Sweat rocks

Wt:

Cost: \$100

In stock: no

Estimated wait time:

4 weeks, none available till June

Components

Prep a level 8 ft diameter circle

This site has a brush windbreak

*Be thorough in the seal at wall base
to stop air and light*

How the cap goes on

*If it is windy,
do thorough staking and guying of the shell*
